

TERRA COTTA

VASES, TAZZÆ, STATUES, BUSTS, PATERÆ, FOUNTAIN BASINS, ETC.,

From Selected and Historic Examples in Terra Cotta,

BY

JOHN MARRIOTT BLASHFIELD.

In placing before the public, for a fourth time, a Collection of Examples of Vases, Tazza, &c., I gratefully acknowledge the patronage I have received from those whose refined taste and judgment have chiefly directed and encouraged the Press Arm of the country the past thirty years, and who have liberally rewarded my efforts to render in Terra Cotta copies of some of the grandest works of Grecian and Roman Art.

In a my instance, in reprinting my old Collection of Vases, to add a large number of additional copies from the Antique, together with many new designs. I propose, in the first instance, to reprint from Wood Cuts a portion of my old Collection, and to follow them up with Lithographs of my finest specimens, inclusive of a Collection of Greek Vases in colours.

Many of the Wood Cuts are from old Greek and Roman Marble Works, and are not of that class known as Antique Terra Cotta. Terra Cotta Vases, adorned with sculptured decoration, have been found in the remains of ancient Greece and

Rurne, as well as large Statues, Busts, Figures, Lamps, and Pedestals; but such Vases do not possess that elegance of contour which pre-eminently dignified the Terra Cotta Vases of plain outline met with in Corinth, Athens, Iola, Nola, and Capua.

These great Greek Works are usually of a hyperbolic, parabolic, or elliptical form; they are mostly painted in black on a red or buff ground. Such forms, and of very large size, can now be produced with great economy by a novel mode of turning works in clay, and without the costly process of moulding. These, six feet in diameter, and Vases of very large size are made at a cost little exceeding the production of similar objects in cement and other plaster materials. It would be very difficult to obtain blocks of durable stone of a fine grain to produce These, six feet in diameter, in one piece, or Statues eight to ten feet in height, but such works are made in Terra Cotta, with true outline and delicately wrought surface, at less price than plain moulded stone work.

Pedestals for Vases are now made either round or square, and as true as stone, at one fourth the cost. There are, at Buckingham Palace, Portland stone Pedestals supporting Terra Cotta Vases five to six feet in height, the Pedestals, though only of the same age as the Vases, have so far decayed, that five of the mouldings are distinct, while the Vases (these Pedestals support, and which are covered with Band-rolled and delicate foliage, are as sharp and fresh as when they first left the kilns in which they were fired.

Properly prepared, and perfectly fired, Terra Cotta is indestructible by frost or heat, and is, therefore, beyond all other, the cheapest and best material for Fountains, Vases, Towers, and all external decorations, especially for the ornamentation of gardens and terraces.

Statues, Busts, Reliefs, and other Fine Art Works, can be modelled in the Terra Cotta. *Clay and fired without the process of moulding.* Such Terra Cottas are more original than works in marble or bronze, which are always moulded in plaster from a clay model before the metal casting, or the marble carving, is produced. Pliny in his 35th Book says that, "Pheidias was wont to say that the craft of working in clay was the mother of Sculpting, and of all works that are cut, engraved, chased, and embossed."

IN ALL
THIS VASE THE DESIGN IS THE WORK OF THE
BEST HANDS.
